BIRD 2.0.x

Monday, 11 June 2018 13:55 (25)

BIRD Internet Routing Daemon is currently the most deployed daemon for router server in IXP environment. It's current stable branch is called 1.6.x. This version has several limitation in AFI/SAFI handling. This talk will introduce the new version branch 2.0.x and show practical differences between those two branches
